Solutions

Agenda

- ⇒
- ① Git Demos
 - ② Basic Command Line
 - ③ Project Overview

Git

CL ⇒ Changelist

① HEAD

② how to work with remote repo

③ Github Pull Request.

④ git cherry-pick

Head ⇒ pointer to the latest commit
in my current working tree

Current active branch

bitbucket / gitea / GitLab \Rightarrow allows to store

when you start working on
a branch of a remote
repo.

git checkout main

\Rightarrow git creates a copy
of that history and
makes your head point
to a detached state

this working tree
is pointing to
a copy of something
that is on cloud

Squash and merge

Consolidate
all these
changes
into 1.

⇒

Release and Merge

Git Fetch

Git Pull

-- Rebase

Git Cherry-pick

10:53 PM

① Fetch → Release

② git pull --rebase

↓
Fetch + Release

git pull --rebase

git pull

⇒ Fetch + Merge

--rebase → Fetch + Release + Merge

git cherry-pick

1
(a)

git cherry-pick a2

- Get the patch of the commit
- ~~#~~ Try to apply that on how my project currently looks like
- If successful \Rightarrow ✓
- else: Merge conflict.

~~git fetch~~

git rebase o/main

exactly
low

git pull --rebase

feature 1

```
2
cd
mkdir
ls
man
```

git push -u origin feature1:main
